THE FORGE ACT

The American Marshall Plan for AI

Architecture for a Citizen-Sovereign Digital Economy.

The Architecture of Corporate Fragility

80%

of Commercial AI Infrastructure is controlled by just 12 mega-corporations.

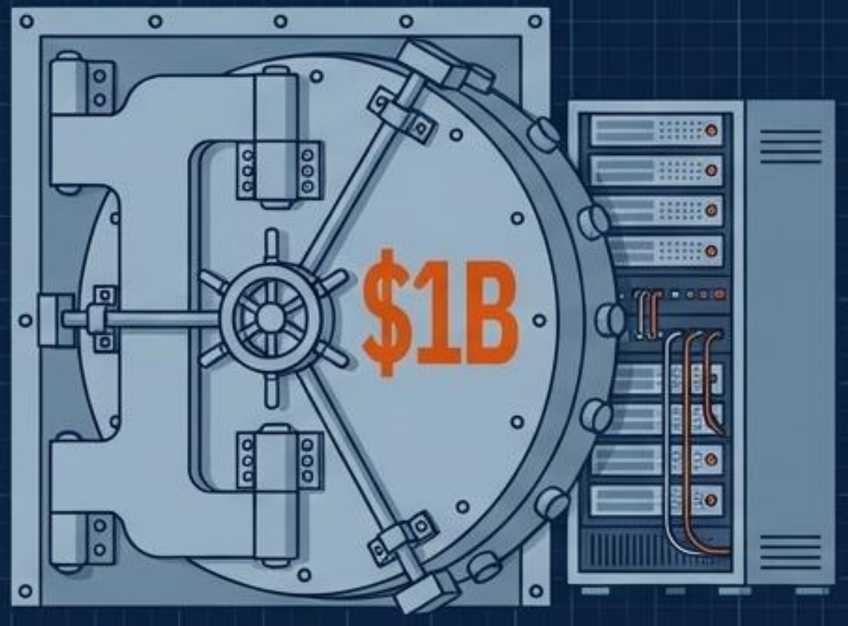
CrowdStrike 2024 Outage

Centralization is a single point of failure. 8.5 million systems crashed due to corporate dependencies.

Systemic Vulnerability: We are renting our digital infrastructure from monopolies.

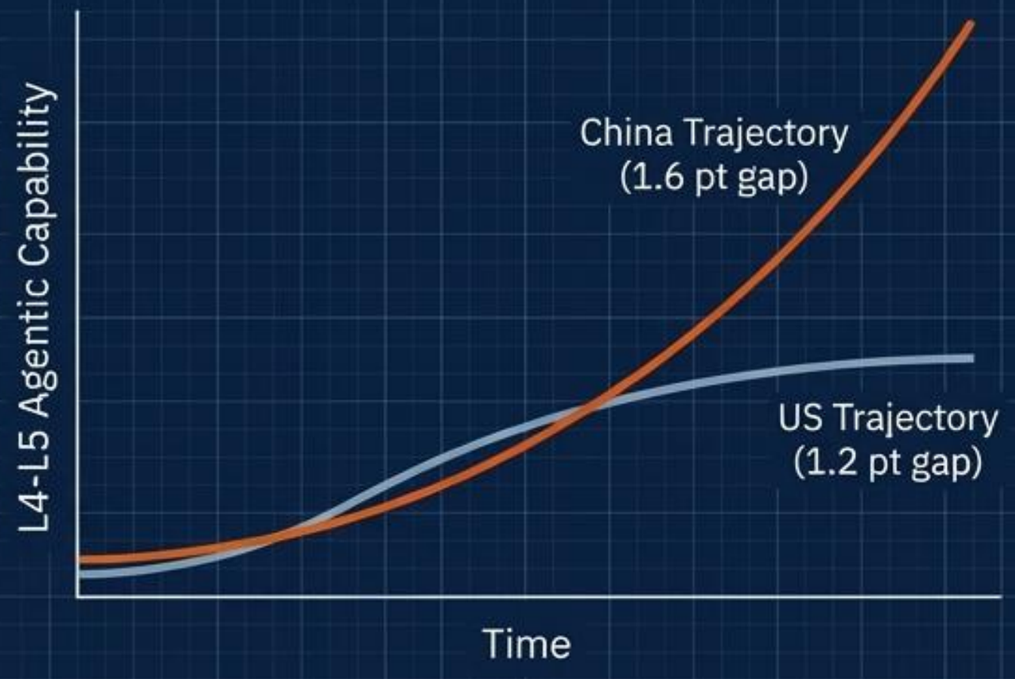
A Two-Front War on Open Innovation

THE MANUFACTURED PANIC



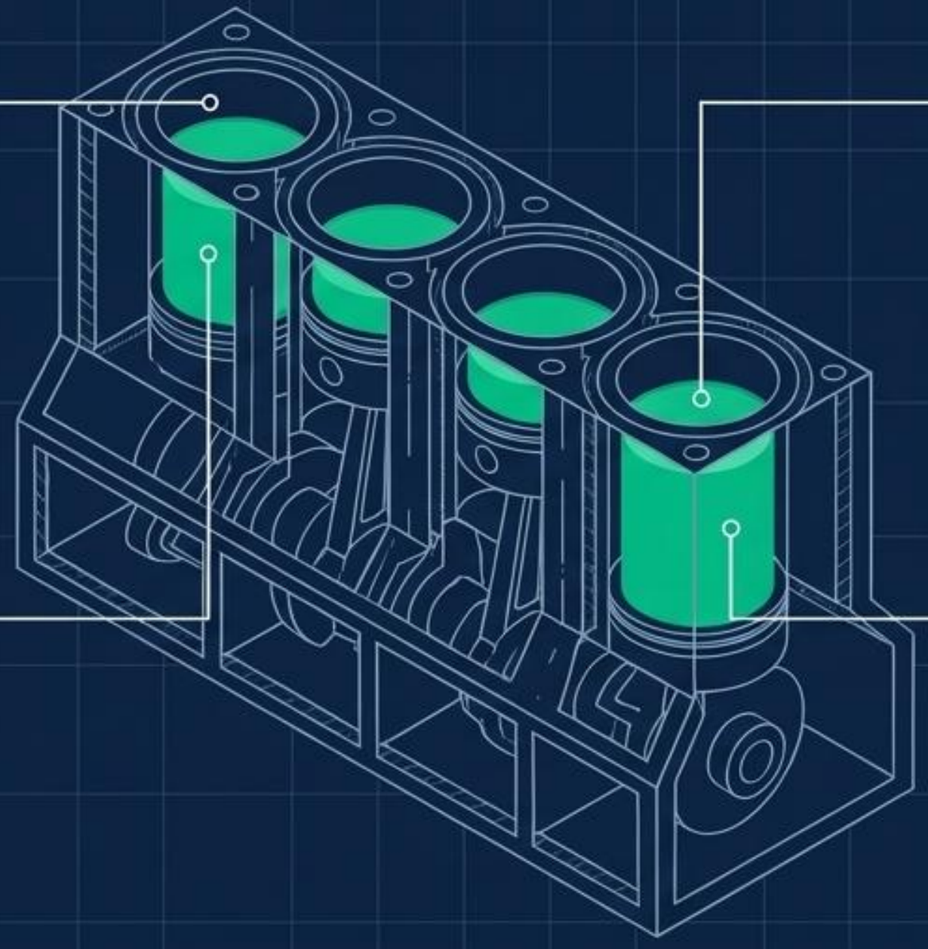
A billion-dollar “AI Doomer” lobby is pushing to criminalize open-source AI, mandating strict licensing that only Big Tech can afford.

THE AGENTIC GAP



China’s open-source flywheel is accelerating, creating real infrastructure threats like Salt Typhoon and Volt Typhoon.

The **FORGE Engine**: Core Mechanics



Strictly Citizen-First

Zero dollars to Big Tech. Entities >50 employees or >$6M revenue are strictly banned.

Working Code Wins

Paper proposals replaced by Solution RFIs via GitHub submissions.

Equal Geography

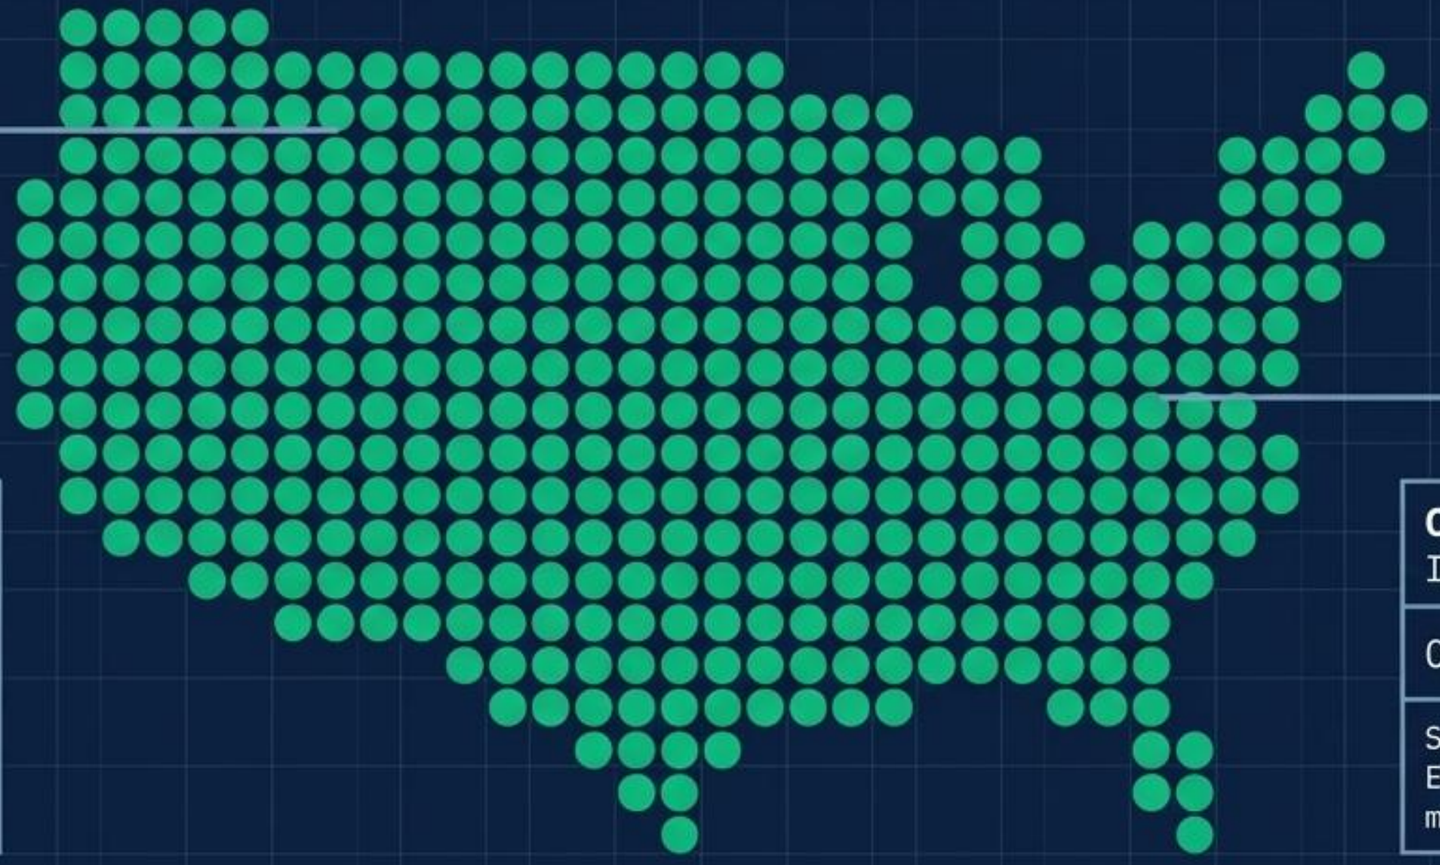
Divided mathematically across all 436 U.S. congressional districts. No coastal bias.

Ironclad Open-Source

All funded innovations permanently protected by mandatory copyleft licenses.

Math, Not Politics: The Geographic Foundation

28 Grants per Congressional District (at $1B/yr tier)



MONTANA (2 Districts)
IBM Plex Mono

0.97% State GDP Impact

Highest relative impact. Rural areas receive a 1.25x funding multiplier.

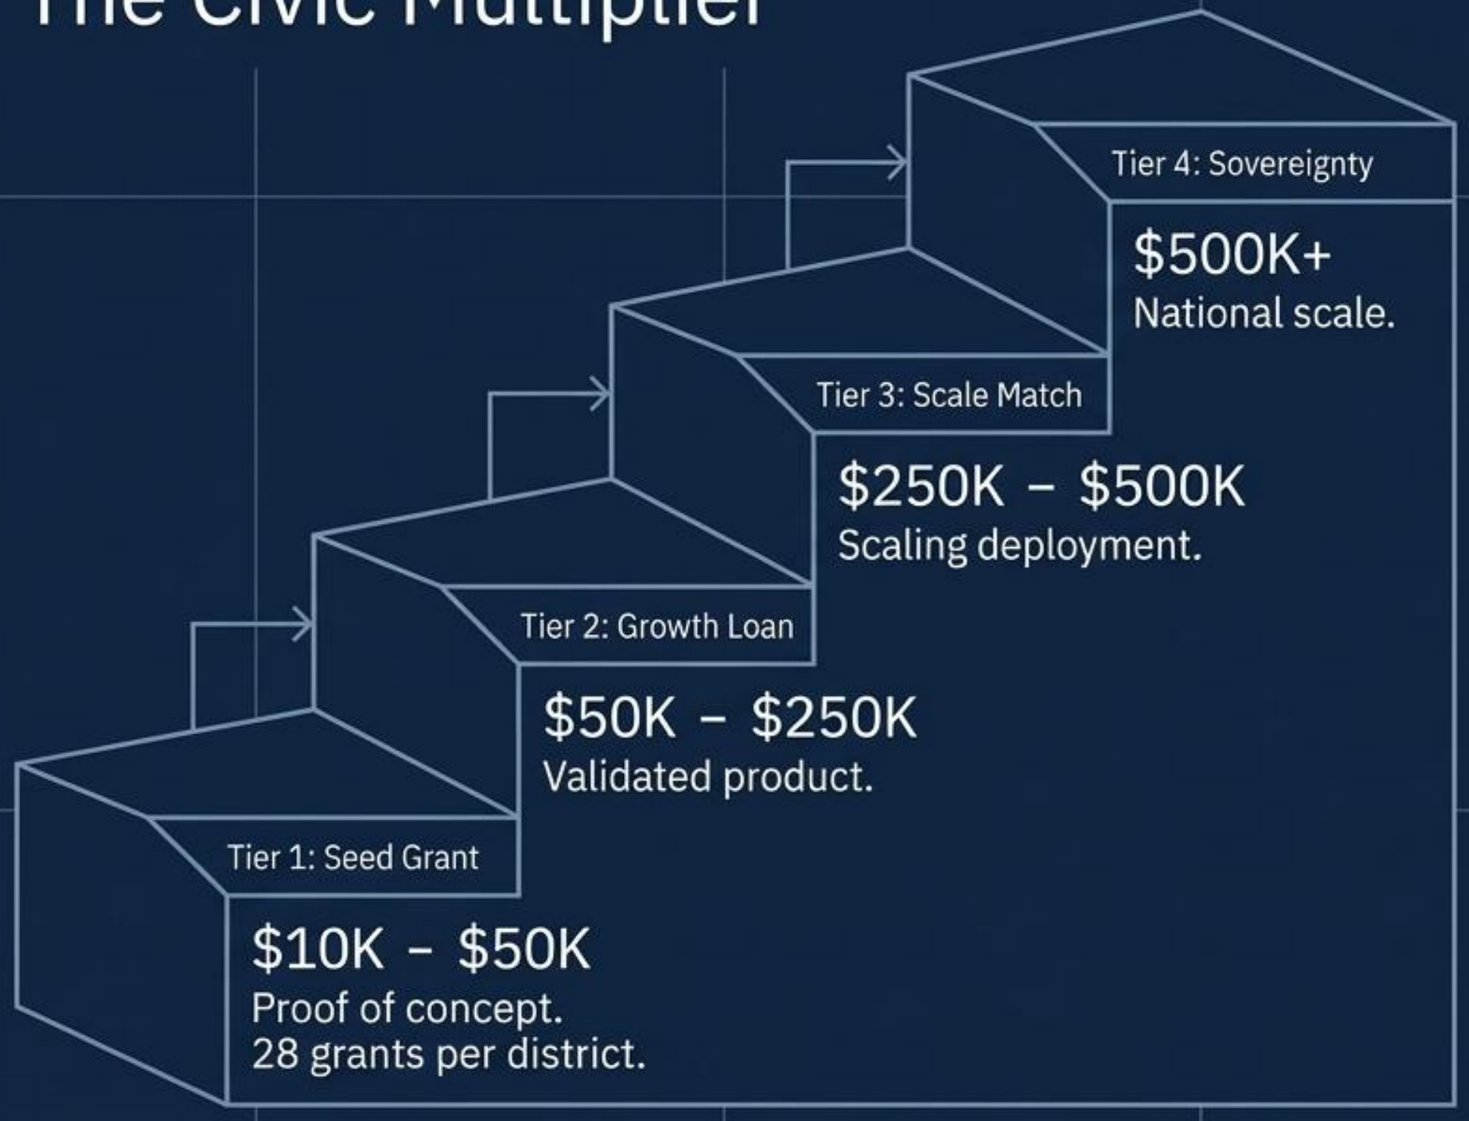
CALIFORNIA (52 Districts)
IBM Plex Mono

0.46% State GDP Impact

Same per-district access. Equal funding is a mathematical constant.

Bozeman gets the same shot as Boston. Equal access is the mathematical foundation of the program.

Capital Allocation & The Civic Multiplier



THE CIVIC BONUS

Up to 1.5x funding multiplier.

Every applicant must be a registered voter with state and federal voting history.

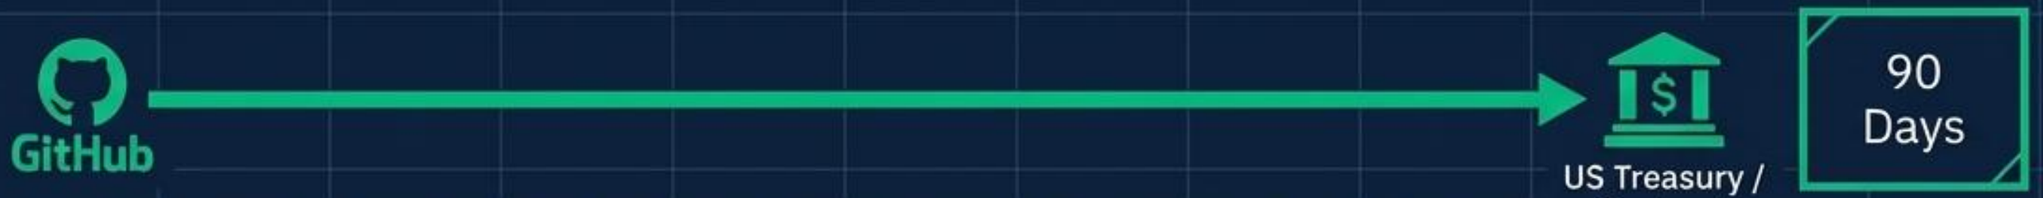
FORGE rewards civic participation, not lobbying connections.

The Procurement Paradigm Shift

Incumbent System

Evaluates: Paper proposals describing potential work.

FORGE System



Evaluates: Automated code scoring of working repos in 48 hours.

Barrier to Entry	Requires Lawyers, Lobbyists, and Compliance Staff	Requires a Working GitHub Repo

A veteran in rural Montana can **win a federal contract faster than she could register** in the old system.

Preventing Innovation Capture

Copyright Capture Blocked

Mandatory Copyleft: Corporate acquirers must maintain OSI-approved licenses for 10 years or forfeit 150% of ROI.

Patent Trolling Blocked

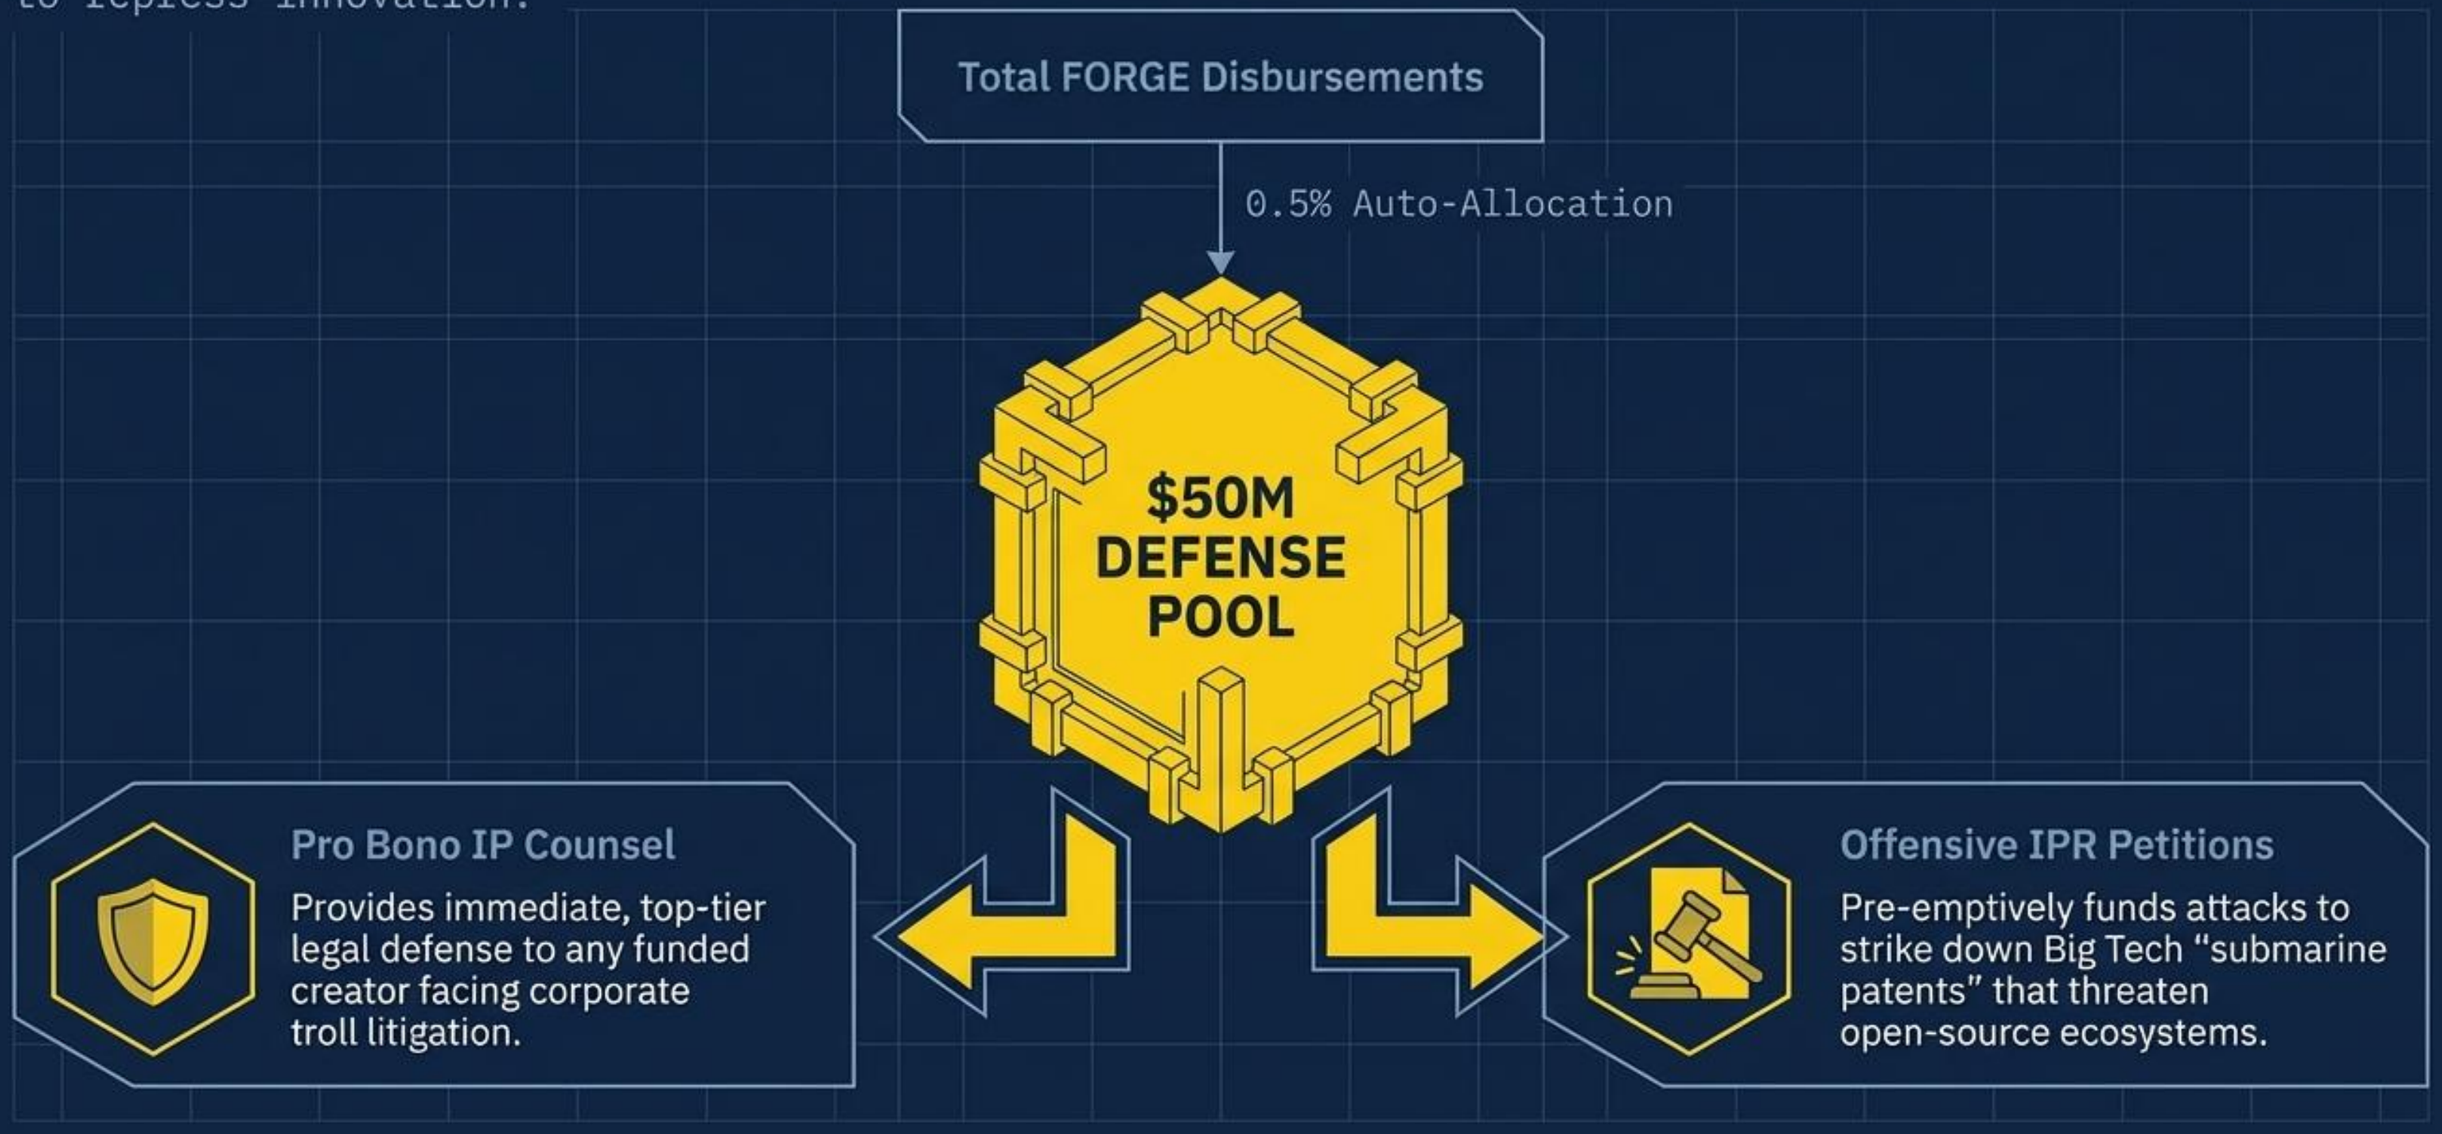
Defensive Publication: Immediate publication to prior art databases automatically eliminates corporate patentability.

Trademark Weaponization Blocked

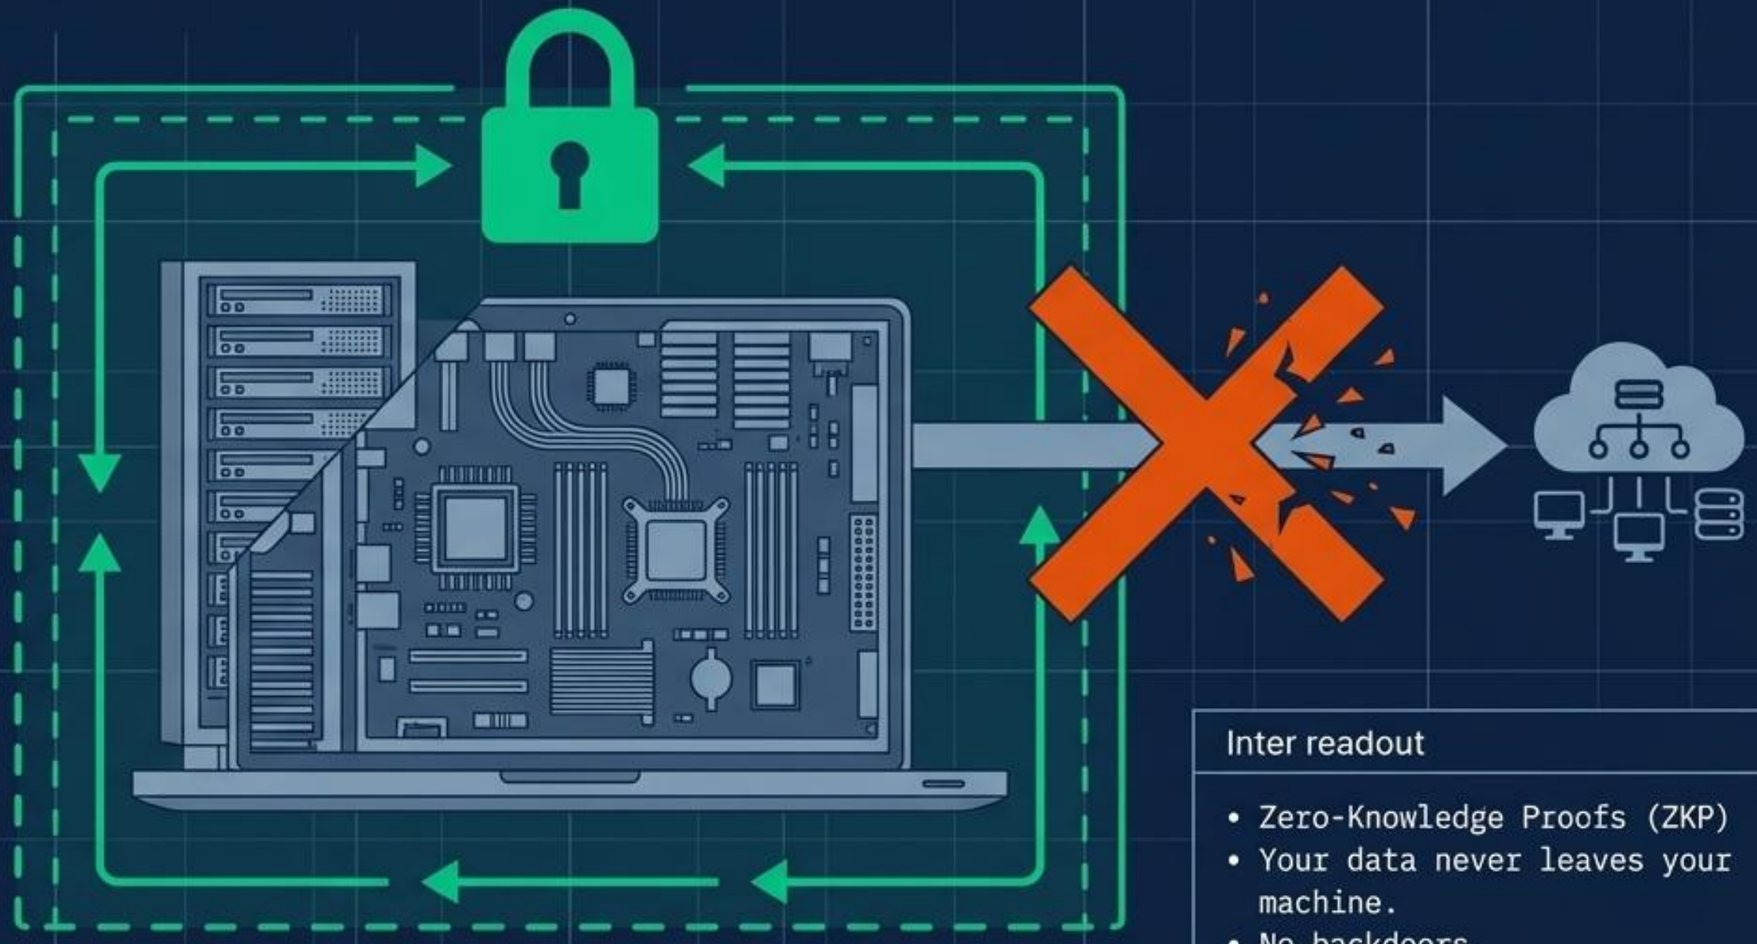
Community Fork Rights: Any restricted codebase can be immediately forked under a permanent, community-owned trademark.

The $50M Patent Defense Pool

Corporations must spend their own money to compete, not use patents to repress innovation.



Sovereignty is the Flex: The Digital 2nd Amendment



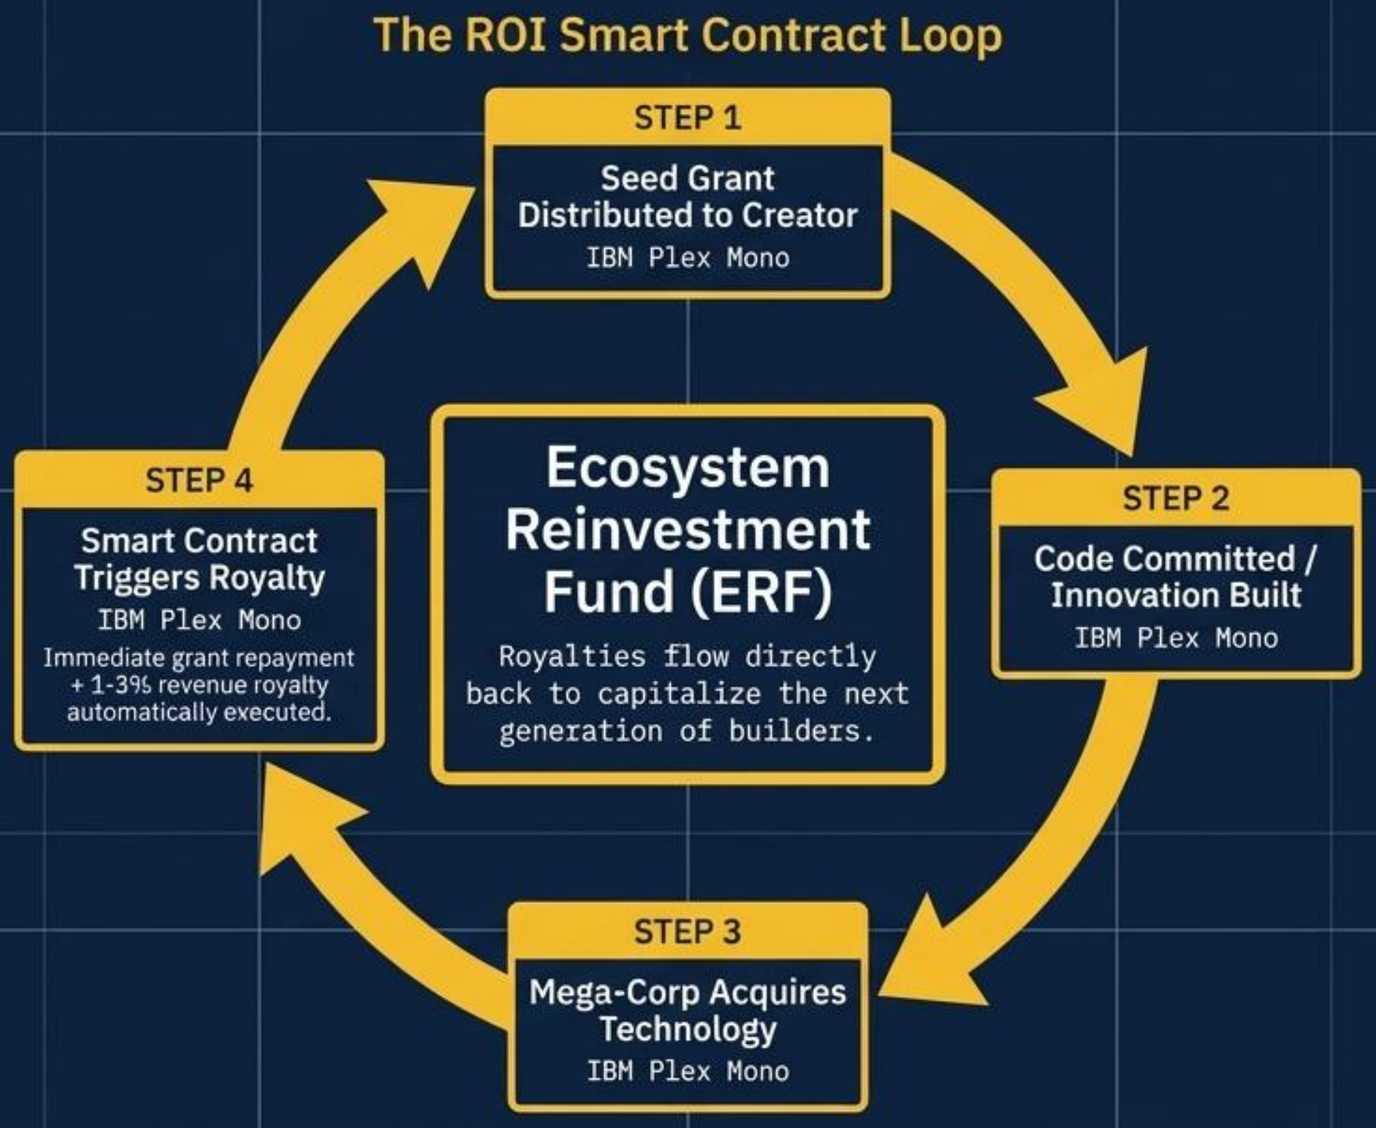
Technical readout

- FORGE guarantees citizens the right to private, cryptographically isolated AI tools that run locally.
- The 4th Amendment extended to personal AI systems.

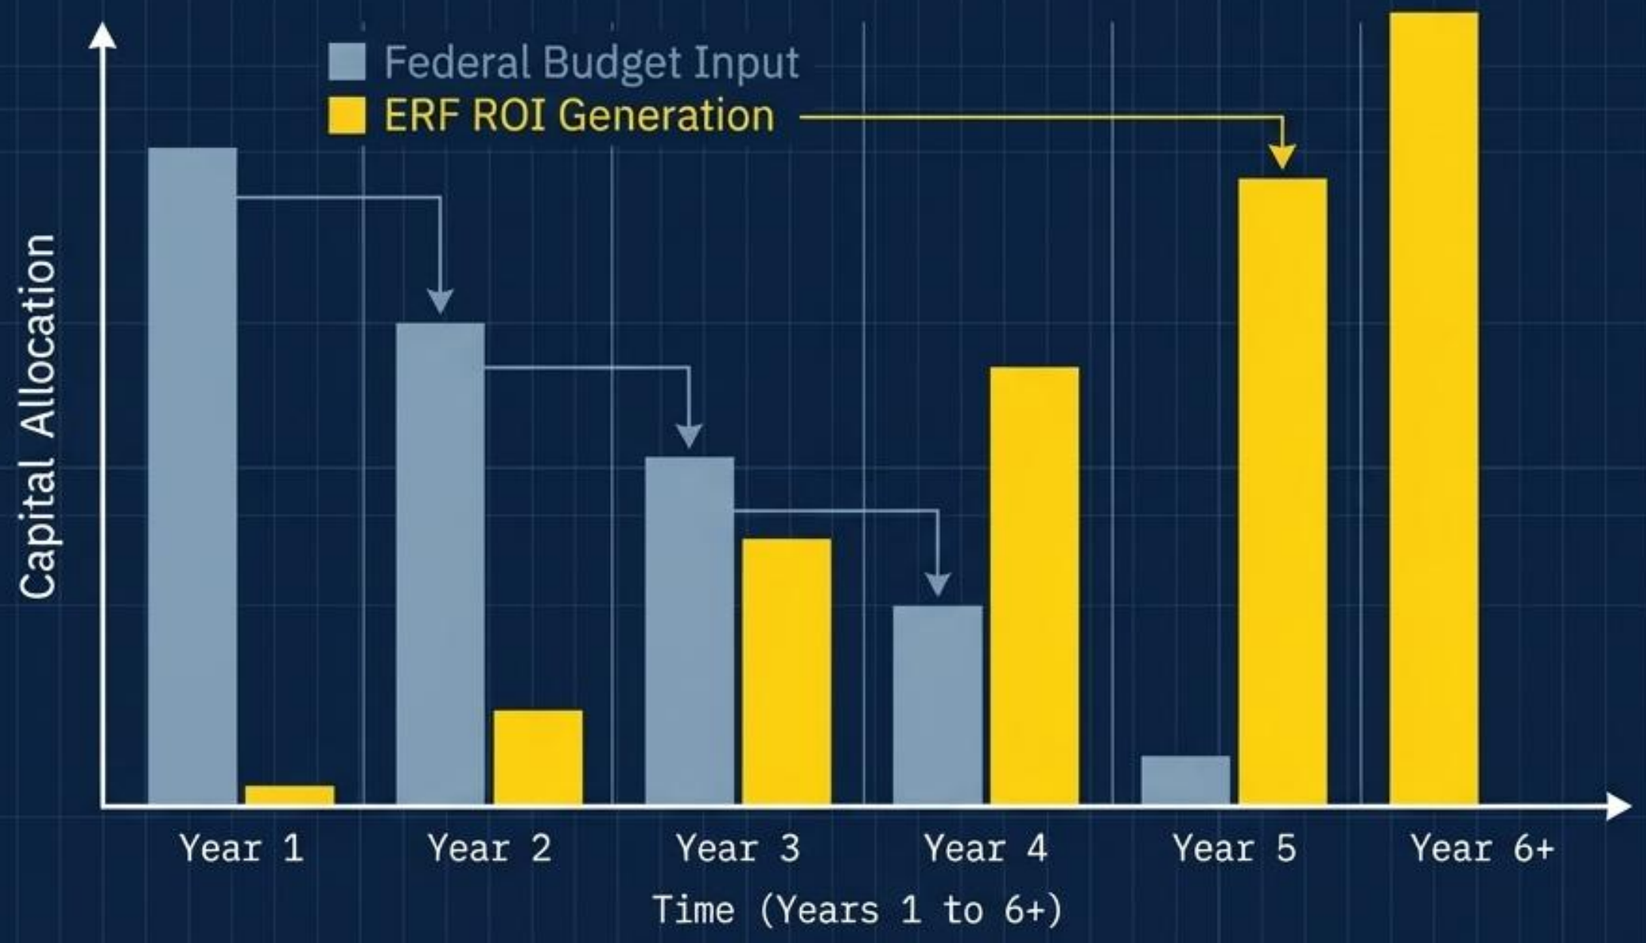
Inter readout

- Zero-Knowledge Proofs (ZKP)
- Your data never leaves your machine.
- No backdoors.
- No corporate escrow.
- No central aggregation.

The Economic Engine: ROI Smart Contracts



Net-Zero by Year 5



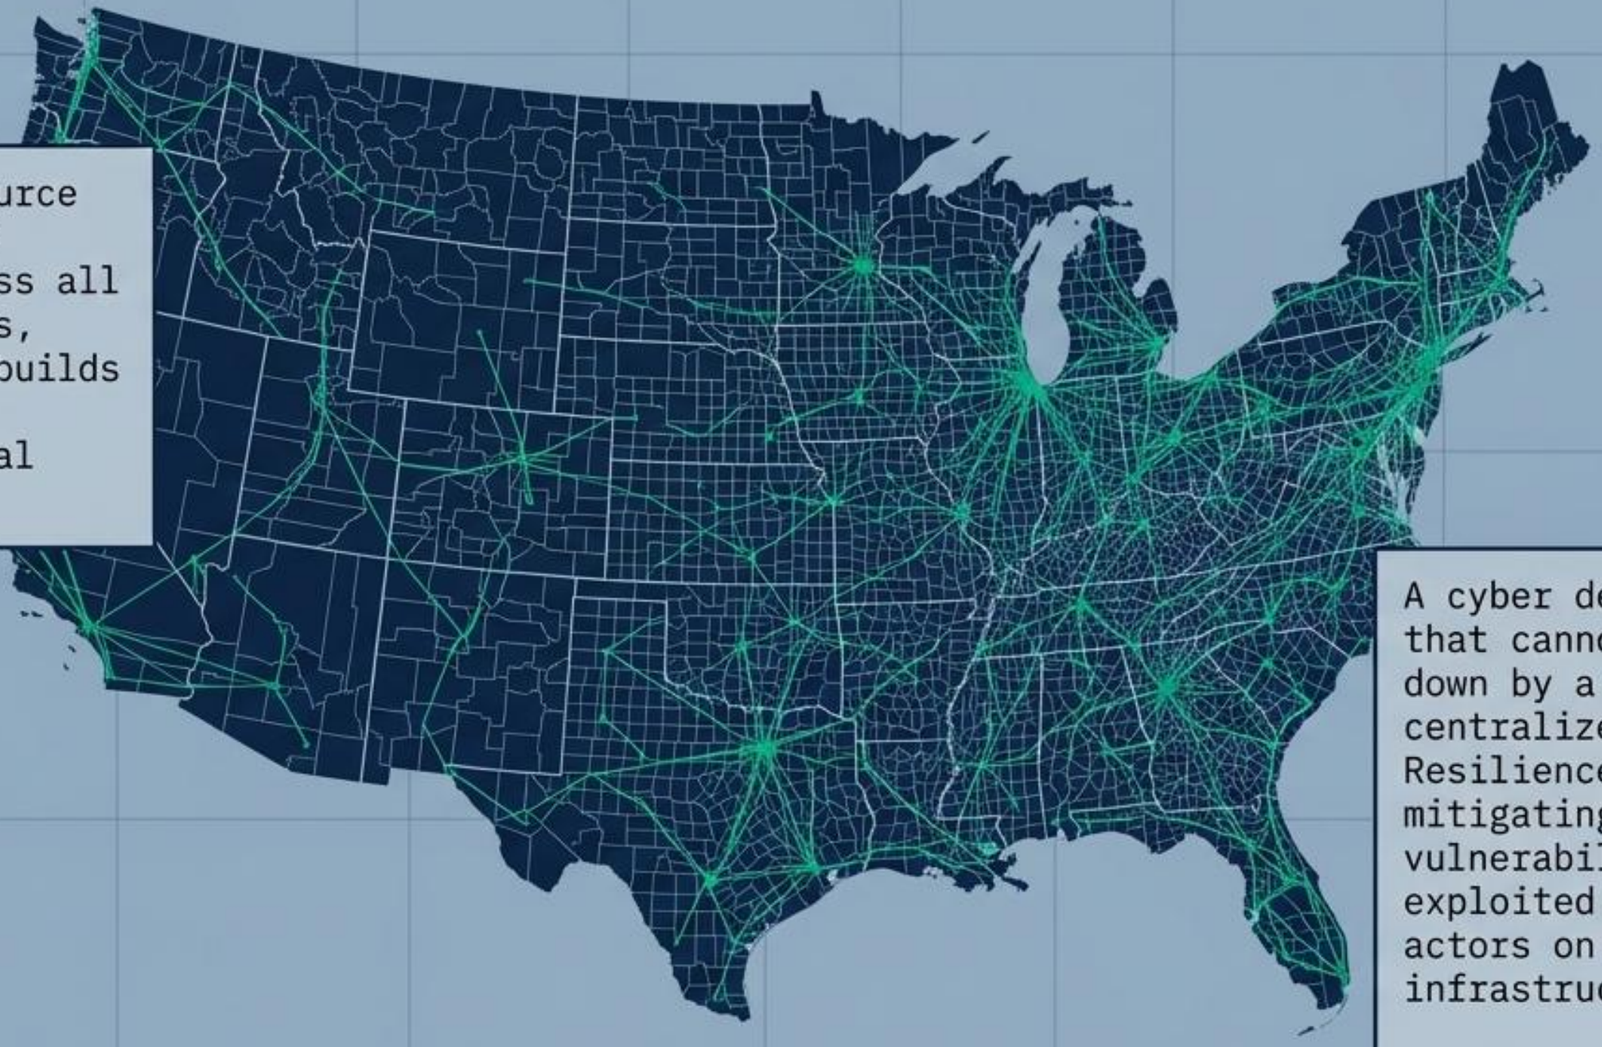
$84.75 BILLION

In ERF returns generated over 10 years at full $500B deployment.

Operating on a venture model (with an accepted 20-30% failure rate), the acquisition successes completely cover the disbursements. This pays for itself.

The Endgame: A Decentralized Defense Grid

By funding open-source cyber tools at the citizen level across all 3,143 U.S. counties, FORGE organically builds a
distributed national defense network.

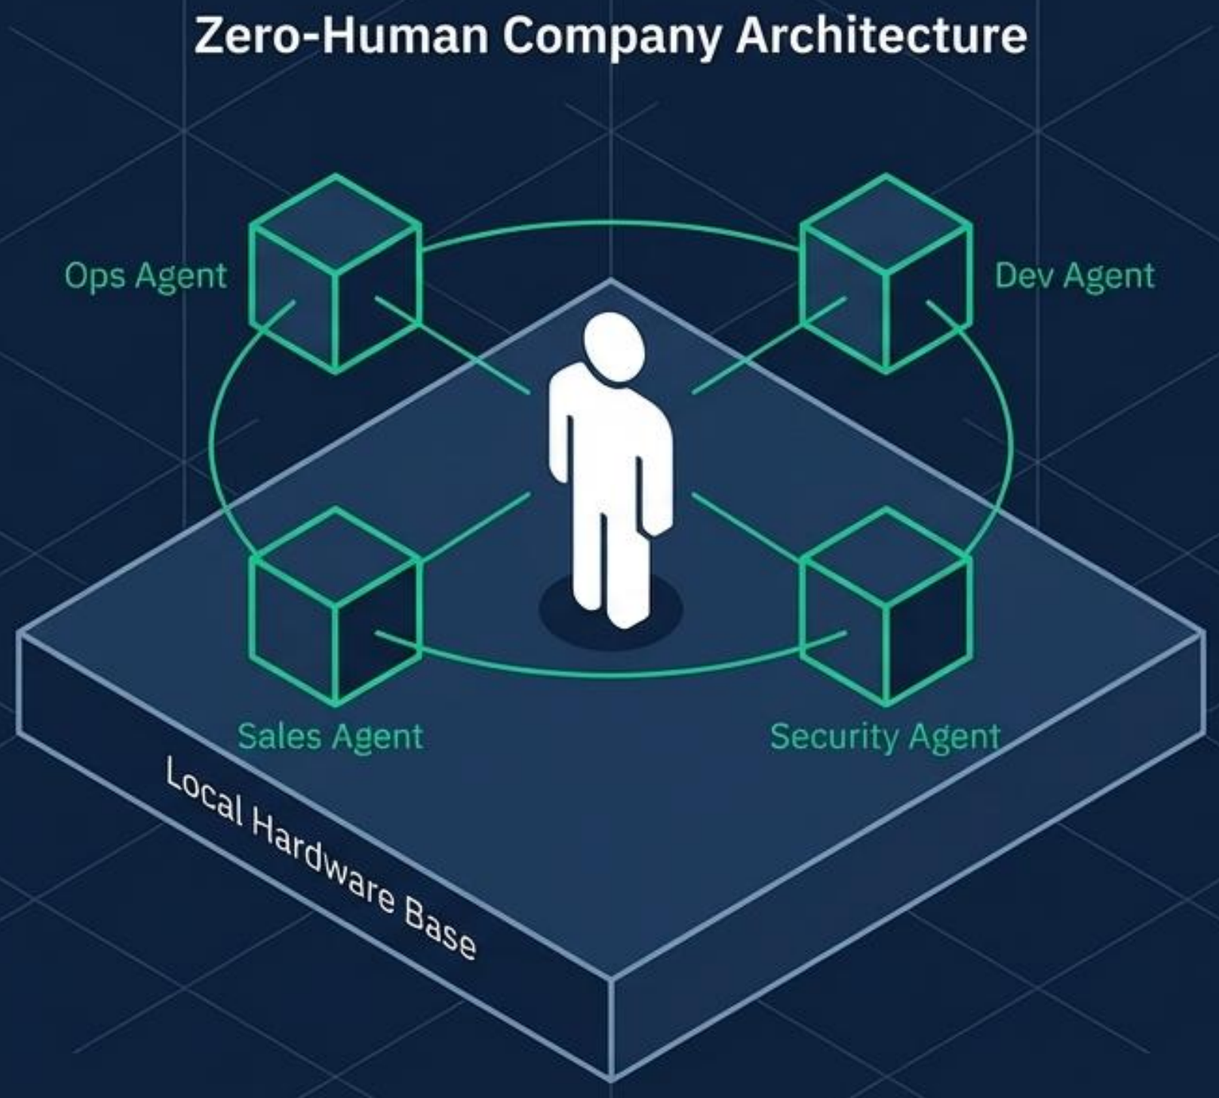


A cyber defense grid that cannot be taken down by a single centralized attack. Resilience is built-in, mitigating the exact vulnerabilities exploited by foreign actors on corporate infrastructure.

The Lifeboat for the 5000-Day Transition

As traditional labor is disrupted by AI, FORGE pays you to build, not to sit in a lecture hall.

We are transitioning from corporate employees to sovereign digital creators.



THE ZERO-HUMAN MODEL

One human augmented by highly specialized, locally-run AI agents = **$1M** to **$10M** in output without corporate dependencies.

Own The Era. Don’t Rent It.

Replaces corporate fragility with decentralized resilience.

Replaces bureaucratic friction with automated meritocracy.

Replaces taxpayer burden with a self-sustaining venture engine.

FORGE is the recognition that great ideas grow everywhere, and capital should too.

The American Marshall Plan for AI.
